

SELDIS

polysteen

Your consultant for lifting, securing and transporting.

Think ahead. Look ahead.
Be ahead.

The best connections
are made with good advice.

EXPERTISE

SELDISpolysteen is full of good connections: for lifting, securing and transporting. But we not only supply top quality products. We supply the capabilities that go with them as well.

Dialogue with our customers creates a further connection: our specialists provide know-how transfer for the benefit of all.

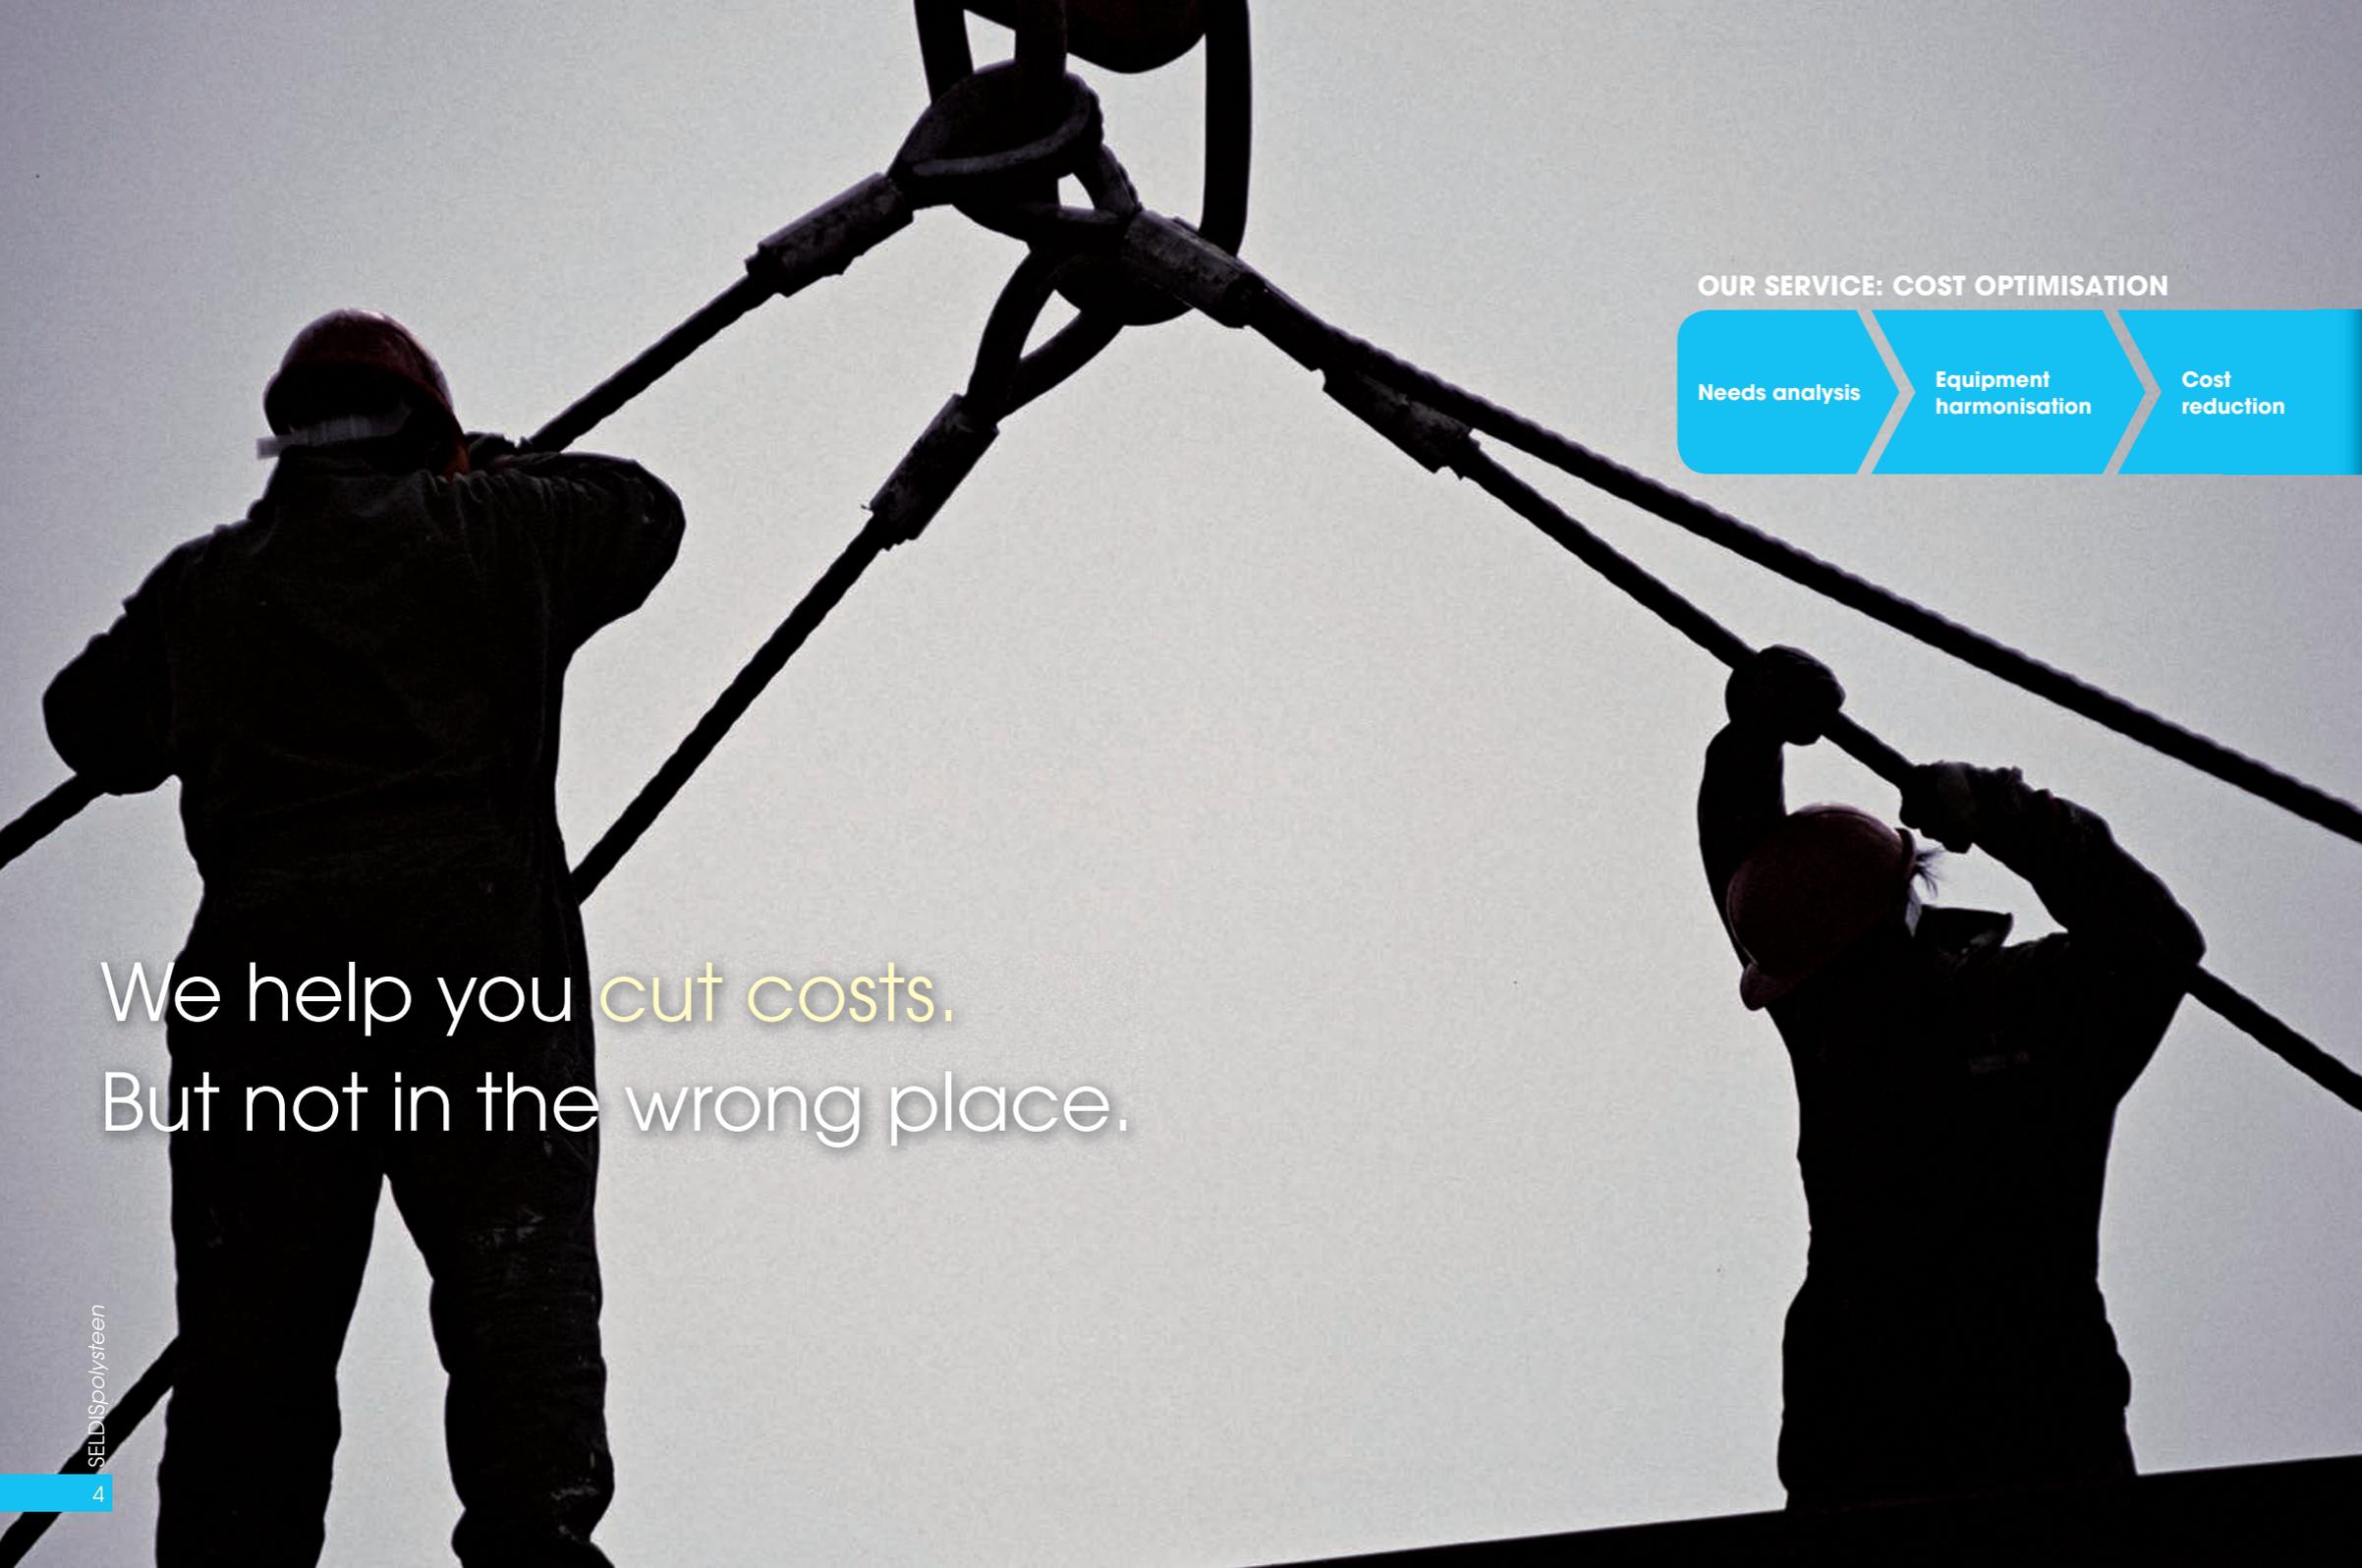

When giving recommendations we have the big picture in mind and all details in focus: from equipment compatibility to customised solutions. We navigate you in product choice and advise you in all aspects of application, handling and maintenance.

We take account of economic aspects, legal requirements and logistical alternatives to clearly identify the solution most suited to your needs: Because the best solution is not always the most expensive.

This business philosophy is one of the reasons for close and trusted relationships with many of our customers over decades. In other words: With SELDISpolysteen you can be sure to make the correct investment.

OUR PRODUCTS IN SERVICE:

- Shipping
- Cargo handling
- Construction
- Energy
- Industry
- Research and Environment
- Road & Rail
- Stage & Studio
- Sport & Leisure

We help you **cut costs.**
But not in the wrong place.

OUR SERVICE: COST OPTIMISATION

Needs analysis

Equipment
harmonisation

Cost
reduction

COST AWARENESS

Our goal is to achieve the optimal result. We balance aspects of purpose, usage and economy that produce savings below the line.

From experience we know that virtually **every task** needs an **individual solution**. Sometimes an interim solution has to be found at short notice. Sometimes management calls for **increased efficiency** in the long term. We give you sound advice and offer you alternatives that equally fulfil technical demands and practical requirements.

Many of our customers benefit further from our **needs analysis**: SELDISpolysteen identifies **savings potential** and so raises your **profitability**.

Making **tons** hang
from threads.

QUALITY

Much is required of our products. They have heavy weights to carry — ships, goods, sometimes even human life. That's why the first thing we have in mind when it comes to production is quality.

Quality begins with the careful choice of **raw materials** and **construction methods**: You can depend on SELDISpolysteen for **consistent standards** and manufacturing techniques that meet the strictest quality criteria.

Since not every service application demands the highest product quality, we offer a **wide range** for all requirements. What you need determines what we suggest — and how much you invest.

In the past we have set new standards as a **driver for innovation**. Today and in future we will continue to work with our customers to develop **new solutions for unique applications and service scenarios**.

QUALITY IS A MATTER OF TRUST:

- Standard to premium
- Development competence
- State-of-the-art production
- Quality assurance through controlling processes

RANGE

We know what you need.
Quality and variety from
a single source

Textile ropes and textile slings

Our connections made from textile materials:
Ropes from synthetic fibres in all material variations: standard to premium, in all conceivable constructions; simple square plait to jacketed parallel laid core, even made from polyamid-monofilas in wire rope constructions, for mooring and towing at sea.

Ropes made from polyester or HMPE, flat woven or as round slings, for lifting larger loads. Belts from polyester for securing the heaviest loads. Plus the classic natural fibre ropes our company started with.

Steel ropes and steel chains

Our connections made of steel:
Ropes made of steel wire for extreme situations, stiff in guys and anchorings, flexible on winches for cranes, for towing and mooring, in service at sea, under water and on land. Wherever objects must be lifted, moved or held. Whenever robustness and durability are required: indestructible chain links, with or without stud.

End fittings

All's well that ends well:
Everything that firmly secures or connects ropes, chains or belts at the end point. Fittings, connectors, accessories for guiding or tensioning: i. e. thimbles, sockets, shackles, chain links, turnbuckles, sheaves, belt buckles and lots, lots more.

EXPERT FABRICATION - A SELDISPOLYSTEEN SERVICE.

Your partner for individual requirements: ready-assembled combinations of ropes, chains, belts, connecting and load-bearing elements. Ready to use for hoisting, mooring or towing, anchoring, tying down or restraining. Expertly crafted. Custom fitted. Durable. Safe.

Special wishes, custom manufacture, intelligent solutions: **TALK TO US ABOUT YOUR NEEDS.**

Complementary products and services

Suitable accessories and complementary products: e. g. lifting points, eyeplates, lifting clamps. Load spreaders, lifting devices. Rope sheaves and guides. Tarpaulins, covers, drapes and protective nets. Fenders and buoys. Signal and rescue equipment. Special tools and assembly aids.

We accompany and advise you on site — in all aspects of application and service, assembly or integration. We also examine and inspect our products in service.

Connections you can depend on.

SAFETY

Where great forces are at work and nature does the rest, safety is the top priority. Our extensive knowledge of materials, standards and service applications provides you full support exactly where you need it.

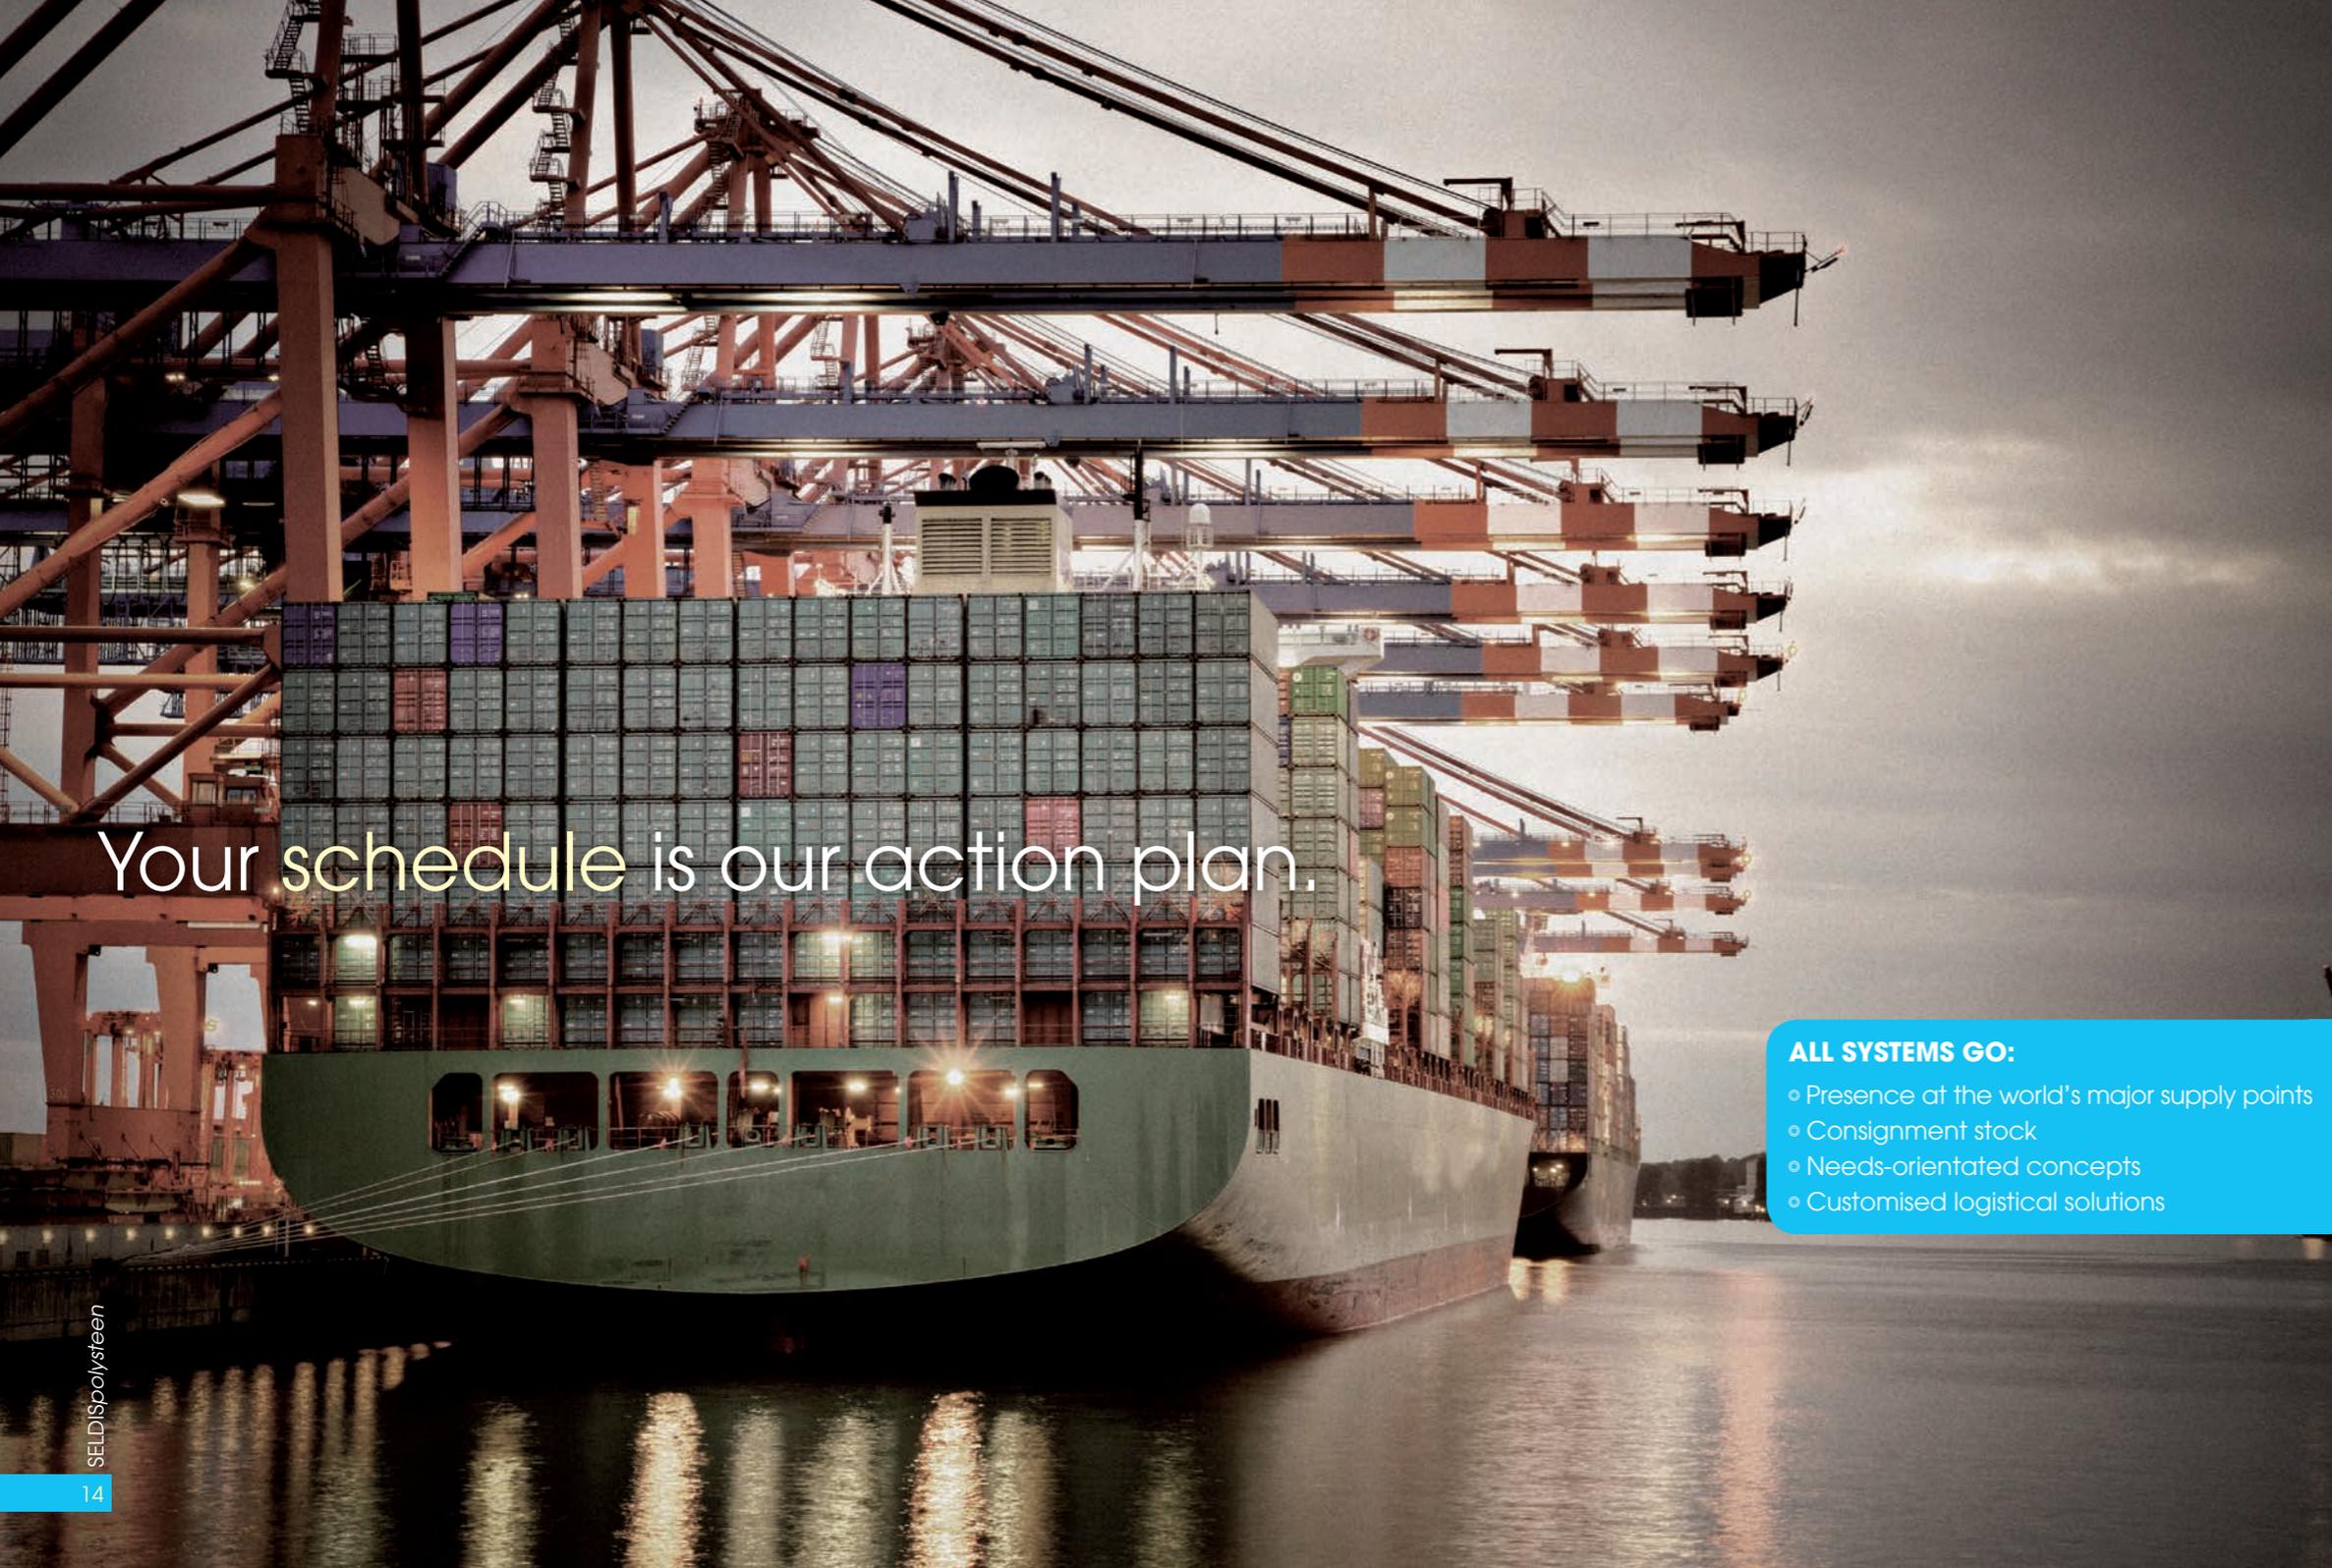

Ropes, chains and belts are not only used for lifting or holding objects. **Human life** might even have to depend on them. That's why our advice always pays particular attention to all aspects of **safety**.

SELDISpolysteen experts ensure adherence to **regulations and standards** set by internationally recognised **classification bodies** and other authorities. What product is ideal for the intended purpose? What standards must be complied with? What guidelines must be taken into account? We know, for sure.

Our know-how **prevents wrong decisions** — and sometimes even worse. In this way we increase safety as a by-product. That's a comfort for your company. And for us, too.

OUR SAFETY RESOURCES:

- Determination of needs
- Legislation and standards
- Assembly and installation
- Monitoring and examination
- Service and care

Your schedule is our action plan.

ALL SYSTEMS GO:

- Presence at the world's major supply points
- Consignment stock
- Needs-orientated concepts
- Customised logistical solutions

SUPPLY MANAGEMENT

Speed, flexibility and dependability are the most important factors in distribution. That's why we develop customised product supply chain solutions for our customers.

We are present at major international ports, such as **Hong Kong, Singapore, Dubai, Alexandria, Rijeka, Rotterdam, Antwerp, Houston** and our home port of **Hamburg**. Almost more important for our customers, however, is our **ability to supply** to other locations **worldwide**.

For this we establish individual, sometimes **unconventional supply solutions**, from our own or shared storage facilities to consignment warehouses, enabling **unbureaucratic, extremely fast delivery** as a matter of course. With **logistical know-how** and reliable contacts we create **synergies** to achieve your goal.

Consultancy and delivery on time: An absolute must for vessels at sea, a huge benefit to our customers in **trade and industry** ashore.
